Optimizing the Decision Rule of a GPS Integrity Monitoring System for Improved Availability Dec 26 2020 The Global Positioning System, which was created by the United States Department of Defense specifically for guiding munitions, has disseminated into many applications of the present. Using a differential, ground based augmentation scheme has enabled GPS guidance to be used for the ultra-safety requisite use of landing aircraft. The civil incarnation of this project is called LAAS, for Local Area Augmentation System. The military desired a comparable system for their use, and has instituted the JPALS program, for Joint Precision and Approach Landing System. The object is to deliver an integrity monitor to satisfy the stringent requirements of difficult military operation. Although the distinction of emphasis might seem to be on the inherent danger of physical conflict, since the landing platform is expected to be distant from any combat, it is actually the electro-magnetic conflict which takes precedence in this thesis. The JPALS land-based, or sea-based, Integrity Monitor must be designed to endure radio frequency interference, RFI. The potential of RFI to undermine the operation of a landing system is quite real. The intrinsic obligation of an Integrity Monitoring System is to bound the errors associated with the guidance being provided. To this end, the system must determine if any of measurements are faulty, and if those fault(s) indicate the presence of a potentially hazardous position error. Hardware and software can be used to mitigate the impact of radio frequency interference to a GPS based landing system. Beam-steering antennas can be used to emphasize the satellites' signals, and to simultaneously deemphasize a jamming source. The focus of this thesis is in the software algorithms. How can we enhance the performance of our system in its robustness to interference, by optimizing the decision rule it uses to exclude satellites, and receivers, thereby maximizing the amount of useable information, and minimizing the error limits that are broadcast to the approaching aircraft.

Inter- and Intra-Vehicle Communications May 11 2022 The PC revolution, the advent of PDAs, and growth in the use of wireless LANs have changed the way we

live our lives. Next on the horizon is the application of new technologies that will change the way we drive our cars. De rigeur for many drivers, electronic passes and GPS systems represent the tip of the iceberg in terms of emerging applications

VW GTI, Golf, Jetta, MK III & IV Feb 25 2021 Volkswagen's GTI, Golf, and Jetta are long-time favorites among sport-compact performance enthusiasts. With engines ranging from the 2.0 liter naturally-aspirated four-cylinder to the 1.8 liter turbo 4 to the VR6, the Mk III and Mk IV generations (1993-2004) offer tuners a wealth of opportunities. This book turns these opportunities into realities, from deciding which vehicle to buy, to keeping it running in tip-top condition, to enhancing the performance and appearance of your VW. Focusing on the engine, wheels and tires, suspension, body kits, interiors, and more, each project includes straightforward instruction along with details about the necessary parts, cost, time, and skill.If you want to get the biggest bang for your VW buck, this book is your road map.
