web step by step solution step 1 we are given the speed of the car as  $v = 55 \text{ ft/s}$  and the radius of the turn as  $r = 400 \text{ ft}$  we are asked to determine the angular velocity  $\dot{\theta}$  of the radial line  $oa$  at this instant step 2 find the derivative of  $r$  using the following relation  $r \frac{d}{dt} \theta = \dot{r} + r \dot{\theta}$  web ref engineering mechanics statics twelfth edition r c hibbeler 2009 dr almukhtar engineering mechanics almukhtar 2 chapter 1 general principals 1 introduction statics is the study of bodies that are at rest or move with constant velocity we can consider statics as a special case of dynamics in which the acceleration is zero gateway the is statics engineering علم into engineering mechanics which is the application of newtonian physics to design and analyze objects systems and structures with respect to motion deformation and failure in addition to learning the subject itself you will also develop skills in the art and practice of problem solving and mathematical web 1 engineering mechanics by ds kumar pdf when somebody should go to the books stores search creation by shop shelf by shelf it is essentially problematic web
